Software Engineer | Web Developer

larrydev@larrydev.com | GitHub

Summary

A highly motivated and results-oriented software engineer with over seven years of experience in designing, developing, and deploying web applications. Proven ability to collaborate effectively in a team environment and a strong passion for continuous learning and staying up-to-date with the latest technologies.

Summary Cont.

A real programmer pivots between different tools and technologies needed to get the job done. With over seven years of combined professional IT and with my software development experience, I have acquired the skills and knowledge to make your project successful. I enjoy every step while working.

Experience

Web Developer

Larrydev | Memphis, Tennessee | May 2021 - Present

Software engineer specializing in building dynamic web applications for diverse clients. Robust and scalable web solutions are developed and tailored to client needs, including:

- E-commerce Platforms: Custom online stores with integrated payment gateways, inventory management, and customer management features.
- Music Artist Management Systems: Comprehensive platforms for managing artist profiles, publishing music content, and event ticketing with QR code integration.
- Fashion Boutique Websites: Stylish and user-friendly web applications for fashion businesses, including product catalogs, order management, and seamless payment processing.

Jr. Full Stack Web Developer

Cape&Bay | Lutz, Florida | March 2022 - September 2022

- Developed backend and frontend features using Laravel PHP and VueJS.
- Contributed to a $2M gym web application, with code reviewed and approved by senior developers.
- Collaborated with a team of 12 senior developers as the sole junior developer.*
  Reference available upon request.

IT Administrator
Scott's Complete Home Services | Memphis, Tennessee | March 2020 - August 2021

- Managed IP cameras via SSH on Linux for workplace security.
- Integrated Google Workspace into company workflow to enhance productivity after learning that no such technologies were being used within the company.

Projects

Client Assessment Web Application
Client assessment application to conduct an initial assessment of the potential needs of a client seeking to have a web application built. The client can upload desired content as videos and pictures. This application has not received any updates in a fair amount of time.
Update: This application was an HTML template converted into a Vue.JS front-end application to suit business needs. Built with Vue 3 Composition API and Laravel 10 deployed on an AWS EC2 instance with a MySql RDS instance.
Update: The project now uses Angular19 running on Vercel.

Technologies Used: Laravel8, Laravel9, AWS

Link to Project

Koinkash Earnings Platform
Koinkash is a fully functional web application using a stand-alone Vue.JS front-end using the new standard Pinia store over Vuex. A Laravel-powered API that generates earned income revenue and Google's Gemini AI-powered chatbot is present within the application as well. The platform is similar to Swagbucks, offering opportunities to earn small happy rewards such as gift cards and cryptocurrency. Along with social topics and the latest happenings in tech. Welcome to the experience. Multiple services via AWS.
Update: The project now uses NuxtJS along with all other mentioned technologies below.
Update: The project now uses Angular19 running on Vercel.

Technologies Used: Laravel9, Laravel10, Angular 19, Vercel

Link to Project

TL Berries
E-commerce web app for a client who wishes to expand their business using technology. The products sold will be items such as Chocolate cakes and Strawberries. The application will have multiple external third-party APIs such as PayPal and Square. Several of the most commonly used AWS services will be utilized. S3, MYSQL RDS, SES, and EC2.

Technologies Used: Laravel9, AWS

Kulture Promotions
I acquired a freelance client. The client wishes to expand their business using technology. The client runs a small business promoting musical talent. The client requested features to enable them and their team to perform tasks such as artist management (creating artists' bios and publishing music content) and a feature to create and check for valid tickets. The event tickets will be scanned using a built-in in-app QR code scanner. The front end is partly dynamic with a CMS feel. The technologies included on the front end include JavaScript and JQuery. The

application will have multiple external third-party APIs such as PayPal and Square. Several of the most commonly used AWS services will be utilized. S3, MYSQL RDS, SES, and EC2.
Technologies Used: Laravel9, AWS

Bold Fashion

E-commerce online fashion boutique. Manage orders, customers, products, and more. This web application will be a medium-large application. The application also has a complete stand-alone backend for admin management. Admin can manage orders and customers, add products, and customize product images, colors, etc. This web application has a Stripe shopping cart via the official Stripe PHP SDK to collect payments for fashion products. The products will be delivered to the customer. Several AWS services are being utilized. S3, Workmail, Route 53, and MYSQL RDS.
Technologies Used: Laravel9, AWS

Skills

- Vue/Nuxt
- MySQL
- AWS
- Angular
- Linux

Education

Associate in Science (AS) in Information Technology

Nashville State Comm. Coll. | Nashville, Tennessee | May 2020

Associate in Science (AS) in Information Technology
